

解码中国治理智慧世界名校项目

Embrace the wisdom of Chinese Governance Program

The Chinese Governance Program focuses on the participation of Chinese society and governance in scientific research tasks and practical activities. Through various forms such as seminars, visits, and field research, it provides students with learning opportunities to gain a deeper understanding of Chinese public governance research and the operation of Chinese society.

At the same time, it provides students with an in-depth understanding of our school's education management model and school culture, and allows them to personally experience Jingchu culture, feel the development of our school and Wuhan, and experience Chinese culture. The project helps participating students experience different educational models and international environments. During the learning process, students have a comprehensive understanding and comparison of the societies, cultures, and technologies of the two countries.
